

# Laser edgebanding

## Laser technology – the future

The functional layer is applied to the panel using a high performance laser and bonds to the board during processing via an invisible adhesion joint.

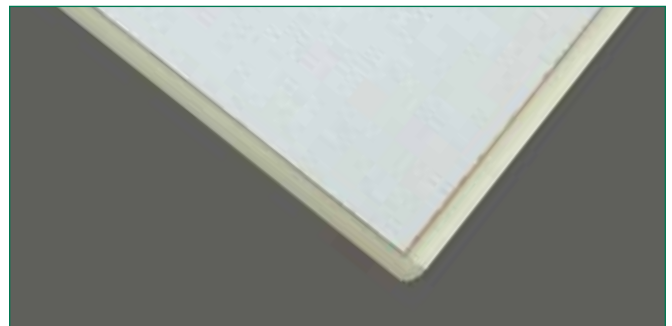

- Laser edgebanding achieves glue line free bonding**
- perfect looks
  - no gap between edgeband and panel
  - highest quality

Unwanted glue lines are a thing of the past.

Laser edgebanding allows a perfect transition from edgeband to panel as if it was cast from one mould.

Laser edgeband

Conventional edgeband

## Convincing in all areas

- increased bonding results
- greater water and moisture resistance
- better heat resistance

Because of the unity between edgeband and panel, laser edgebanding surpasses traditional edgeband bonding techniques and leads to a clear advantage in terms of processing and optical results.
